

UNIVERSITY of GUELPH

Ontario Veterinary College
Teaching Hospital

Short Stay Record

Date of Admission

Oct. 19/10

Clinician(s)

Dr. O'Shady / Dr. Schuckman

Presenting Complaint/Request

Admit for Balloon Valvuloplasty Procedure.

Summary and Plans

Thanks for bringing Emma in today where we have performed an exam and have reviewed information from Dr. Sandra Minors. Per Dr. Minors report, Emma has severe pulmonic stenosis in addition to a hypoplastic ~~annulus~~ pulmonic annulus and suspected atrial septal defect. While we have discussed performing a Balloon Valvuloplasty by the cardiology department, a surgical procedure called a Patch Graft may be more appropriate given Emma's hypoplastic annulus (door frame problem). The combination of Emma's congenital conditions, in addition to her small size, make her at increased risk of complications under anesthesia or not. If interested in performing the surgical procedure at Guelph, the surgeon would be available the week of Nov 8 and we would work with this team to ensure Emma does not have yet an additional

Congenital abnormality of the coronary arteries by performing an angiogram. Alternatively, we will search for other universities with more experience performing the procedure and will contact you at that time. Should you have any questions or concerns, please do not hesitate to call OVC Cardiology at 519.824.4120 ext 54047.
